

**APPENDIX A-1: Comb Cemetery Inventory by Quadrangle Map:
Locations, Numbers of combs, Notes**

NB: GPS set for NAD 27 datum (same datum used for topos)

NB: * indicates lat-long measured from the quads, not on-site GPS readings.

First number after quad name = number of comb cemeteries in quad, based on numbers in (), i.e., sum of number of cems with extant combs + number of cems with only ex-combs. NB: Cems with only “possible” ex-combs listed but not included in comb cem total for quad (there are 10 such cems listed)..

NB: Among the ex-comb cems included in the comb cem count are three cems recorded as comb cems when first surveyed, that when resurveyed (2011-2019) were not only found to no longer contain combs but which were said by informants who should know to never have contained combs. The rationale for including these three cems in the ex-comb cem count is this: It is unlikely that the mistake of mis-recording a non-comb cem as a comb cem occurred three separate times during this survey. More probably the informants had their own reasons for denying the former existence of combs in these cems. Ex-comb cems listed in blue.

Number of extant combs, used to calculate total extant combs in Tennessee (2011-2019) given in brackets []

UID = Unidentified cemetery, no basis on which to name.

If you know of any Tennessee comb cemetery not included in this list, please contact the author at rfinch@tntech.edu
